PATENT

Application No.: 09/943,483
Filing Date: August 29, 2001
Inventor: Henry Wu
Title: "FOLDING CHAIR"

Unofficial

PROPOSED AMENDMENT TO CLAIM 7

7. A padded sign displaying apparatus, comprising:
- a folding chair having a pair of spaced legs and a seat portion and a back rest portion that extends between the spaced legs wherein the back rest portion provides support for a person's back when sitting on the seat portion wherein the back rest portion includes at least one edge a first edge and a second edge that is disposed opposite from the first edge; and
 - a padded sign comprising:
 - a main body having dimensions that conform to dimensions of the back rest portion such that the main body also includes a first edge and a second edge that is disposed generally opposite from first edge, wherein the main body further includes a front surface and a rear surface;
 - at least one first retainer attached to the first edge of the main body, wherein the at least one first retainer is dimensioned to be urged over the first edge of the back rest portion thereby retaining the first edge of the main body adjacent the first edge of the back rest portion;
 - at least one second retainer attached to the second edge of the main body, wherein the at least one second retainer is dimensioned to be urged over the second edge of the back rest portion thereby retaining the second edge of the main body adjacent the second edge of the back rest portion such that the rear surface of the main body is positioned proximate the back rest portion of the chair and such that the front surface of the main body faces the person's back when the person's back is supported by the back rest portion; and
 - ~~a plurality of retainers attached to the main body for securing the main body to the back rest portion of the folding chair such that the rear surface is~~

~~positioned proximate the back rest portion of the chair and such that the front surface is positioned to come into contact with the person's back when the person's back is supported by the back rest portion; and~~

a padding having an outer surface attached to the main body wherein a message is inscribed on the outer surface of the padding so as to be positioned in front of the front surface of the main body.

Add a dependent claim as: The apparatus of Claim 7, wherein the first edge of the back rest portion and the first edge of the main body are oriented toward the top of the back rest portion, and the second edge of the back rest portion and the second edge of the main body are oriented toward the bottom of the back rest portion.
